Abstract: This paper aims to highlight the role of using modern technology in teaching English as a second language. It discusses different approaches and techniques which can assist English language students to improve their learning skills by using technology.

Key words: web sites, computer assisted language learning programs, presentation software, electronic dictionaries, chatting and email messaging programs, listening CD-players, and learning video-clips

The introduction of information and communication technology (ICT) to education creates new learning paradigms. We are dwelling in a world which technology has reduced to a global village and the breakthrough in technology is underpinning pedagogical submissions. It may become imperative therefore to have a rethinking on how to ameliorate the constraints of second language users through the applications of modern technologies. The interactions between new technology and pedagogical submissions have been found to an extent to be addressing the heterogeneous needs of second language learners and any global discovery which aims at minimizing learners' constraints is a welcome development in a rapidly changing world of technology.

Modern technologies in teaching a foreign language.

The last years increasingly raised the issue of using modern technologies in the educational process. It is not only new technical means, but also a new forms and methods of teaching, new approach to learning. The main goal that we set for ourselves, using modern technologies in learning a foreign language it's to show how technology can be effectively used to improve the quality of teaching foreign language students,

the formation and development of their communicative culture, learning the practical mastery of a foreign language.

Technology allows individual pacing: Multimedia tools, on-line and CD-ROM based training have helped eliminate the need for an instructor-based lesson plans. Pupils who grasp concepts faster proceed and move along, without being held back by ones who need more time and help for learning. Such individual pacing is beneficial to all.

Technology helps lower training costs and increases productivity: Another benefit of using technology to reach many pupils in shorter time is lowering training costs. Corporate and academic Institutions can reduce their costs of delivering lessons to pupils on a per-pupil basis. Moreover, technology produces quantifiable results and allows pupils to put into practice this information quickly and with better results. Through the use of technology, pupils can considerably save time and increase their productivity. Both these points justify the higher costs of advanced technological tools.

Roadblocks in the use of technology in learning: Naturally, for education technology to have a positive impact on pupils, it should be designed and prepared well. Tools used for disseminating information must be developed with pupils in mind. There are also factors like lack of computer/technology literacy to be considered. Schools and businesses must bear in mind that education technology is simply a tool and its success depends largely on the amount of planning that goes into it. Using education technology can be a right choice as long as all such factors are considered.

With the development of technology and the boom of digital revolution, foreign language teachers find it necessary to think about effective new ways to create a better foreign language teaching and learning environment that is supported by multimedia technologies. As a result, Computer Assisted Language Learning, or CALL, has become increasingly popular in the foreign language teaching field. Based on the analysis of the features of CALL, this paper is focused on how multimedia can play an

important role in EFL classrooms. The literature review was conducted on definitions and the development of multimedia. Furthermore, the review of the literature was conducted on multimedia as a teaching method from both theoretical and pedagogical aspects. By analyzing the weakness and the strength of CALL, some practical and effective teaching ways, as proposed by professional educators and qualified teachers, are discussed on how to effectively use multimedia in the classroom.
