INTRODUCTION

The material and the spiritual about students and the specialists in the production of certain roles in the social life on the basis of the special rules on the cooperation between the program and the social group is understood to be ready to fulfill up.

The specific features of education in higher education of students with other social groups (be they formal or informal, or, whatever) into the active involvement creates important opportunities for communication. One of the main features of our handle with the accelerated pace of social maturity period, the implementation is. As it is known, social maturity (maturity) from the person to take the necessary mental and social life of the different roles fulfilled in (family), to educate children, to participate in the useful work (the task is responsible to work in ready) requires strengthening. The main criteria and indicators of this process informative the medium of the public, as wasthedisorder show active in the work of the world before the law, responsibility and the opportunity to become an expert, a sense of aspiration to him, to give excellent voluntary, young fatherhood and motherhood duty to the function of a public figure, head of the social group, and consists of sports etc. deal with¹.

¹ Волков Б.С. Психология юности и молодости: учебное пособие для вузов. М: Трикта: Акад. проект, 2006. – С. 116.

The creative thinking of the students in the process of educational work, to changing situations to teach their lessons and practical activities on the basis of free competition in the organization of information technology, e-books, and multimedia versions available, it is important to have access to. These students independence, free thinking, nurturing, educational activity, the analysis of professional skills and computer literacy to increase in the future requires the implementation into their own internal needs.

Qualified personnel in the area of development and production of the system on a continuous basis with operating various needs great work experience, comprehensive capabilities of full implementation of professional activity in the person's own person they brought the problem to manifest itself. A future without solving these problems the quality of education can not success in professional activity planning and implementation. The practical significance of this problem in a number of diverse subjects within it showed the importance of studying within the framework of psychology.

MATERIALS AND METHODS

The second stage of our youthful period, and includes a number of unique features and is characterized by resistance 17-22-25 and his age. Therefore, the social and professional status of the person from the youthful period begins from the mean. This amazing youthful specific spiritual crisis or strain is experienced. Confirmation of the different adults in particular (see in spite of him cute or pretty) with a fast pace strives to see the role you're done, you will start to get used to new ways of lifestyle. The identities of the process of transition to the lifestyle of older people depends on the characteristics of the internal contradiction of finding the person produces.

Pedagogical – psychological science as it is known, each of secondary school pupils (biological, physiological, pedagogical, psychological) from the aspect of high school education and prepares them in synthesis, abstraction programming to like the visible qualities will display. In the meantime youthful intellectual, moral, aesthetic, and ideological – political aspect of a particular level of growth will take

place. Shtom him, despite the fact that specialists in the universities associated with the addition to master new tasks in front of them will appear. The present technique, the development of science on the one hand the information does increase, second-hand knowledge leads to loss of interest to students and professionals on the cooperation between sustainable. Because, persistence, creative research, voluntary give excellent location apathy, inactivity occupy. In other words, they are “a slave of information ready to become”. Because computer, display, internet, calculator, bring relief to the human mental labor, giving them mentally will deliver excellent. For this reason foreign students in front of a higher education institution in the program to set important function of education is to give knowledge. Independent students to get its own activities be organized, self – management, and the production of new ideas is to teach. The main factor in the realization of these tasks – monologue, dialogue from the report (based on communication students and teachers) lecture is passed.

M.G.Davletshin, I.I.Ilyasov, category: architectural drawing A.A.Verblskiy, V.A.Tokyareva and the insights of others, according to a very rough night for students to get education in higher educational institutions because it was complex during this period of the person's qualities, attributes to the stage of quality improvement will be. One of the features of growth in this age period social psychological motives to strengthen the activity of reading is that it is conscious of. Stagnant growth in the ethical process of students failed in, but your attitude is the most important qualities – independence, enthusiastic, ingenuity, not wise and will go to the improvement of etc. Also, folding them in social realities, ethical rules of interest in pursuing the implementation of increasingly intensified them².

RESULTS AND DISCUSSION

The life experience of the individual to realize the self in psychology position our research shows that it came into being. The content of your personal life to understand the drafting of a clear plan, it may also include the way of life the future is set. Students gradually get used to the unfamiliar conditions of

2 Davletshin M.G. va boshqalar. “Yosh davrlar va pedagogik psixologiya” T.: TDPU. 2009. – B. 46-48.

microgroups will go to his rights and obligations to begin with, the appearance of a new set of relations interpersonal, personally practice test social roles in life strives to see. Emotions somewhat romantic approach will prevent them to certain realities. Because of the social and psychological roots of success and achievement in their life is that they do not have a clear idea about what.

See science in psychology and the analysis of material collected from physiology young students 17-19 years old are also conscious of their behavior and cognitive abilities, motives, behavior, and accordingly will not be able to manage the basis of long term than, let's take cases like carelessly will take place.

According to V. T. Lisovskiy to afford some negative opinion in the age of 19-20 action is removed. Desire and aspiration and the development of the character in the present age is going to make much progress. Thus, the person's life experience plays a particular role because students lack of experience as a result of this theory with practice, the reality with the fantasy, romantic with exotic possessing, with the illusion of truth, the desire with the desire stringent with optimism sends the mix³.

In the years of our youth in the activities of life and self-maturation plays an important role in the delivery process, but self-management components (self-analysis, control, reviews, check and others) also plays a special role. Ideal (high, stable, harmonious) “”real (clear case) “” by comparison with the self-management component have the practical expression of to be. According to the student's view of the ideal, “” check-in could not also sufficient on the basis of certain criteria, therefore they constantly sometimes random, abnormal to feel inevitable, consequently, the real “” objective the improvement of such internal confrontation also the person in relation to their personality, the inability to read relatively negative will arise in a relationship. In particular, at the beginning of the academic year students in good mood, the feeling of ecstasy and pleasure from access to higher education if they follow the conditions of education, the content, the essence, the order of the day, certain laws and rules to get acquainted with

3 Лисовский В. Т., Дмитриев А. В. Личность студента. – 1974. С. 64.

dramatically as a result of his mental blocks the breakdown will take place. The above-mentioned internal and external means, his frustration caused by the effects of the factors in the world of spiritual, mental in a mess the mood, that is, the inability to run, the latter is the display of negative feelings such as hiccups. The plan of educational work in higher education institutions, in particular to students in the education process to be in a relationship is one of the important conditions of this period. Above mentioned in spite of that, the power of their own young men and women to receive higher education, skills, insight, internal capacity and strict confidence to the will of mind. These activities in turn organized life full of confidence and a sense of hope will arise.

To conduct the second period of youthful, evaluation and persistence in addition to the requirements of the realities of the opportunity to put in is distinguished by the feature. Therefore, students can't always be fundamental. Sometimes we adults firmness also becomes a negative reaction. They often deny the recommendations of the student teacher produces disputes.

The guidance noted that the scientific research work of b. g. is known in tradition, students find the fullness of their mental capabilities and sexual friendly and full of features neurodynamic an important opportunity for viable to organize educational activities and work, creates the conditions⁴. Noted noted y. a. Samarin, the age find the identities of different social – psychological confrontation specific featured, there will be internal conflict. Material respects to the parents in their higher education administration related to the economic conflict produces. Disproportion occur due to the desires of students to available with this position.

1 and 3 higher education institutions and students in the course are usually bilateral relations specialist why choose think more seriously about it. In this age period self-management components, creative thinking, knowledge of the regulation on the basis of life experience, I feel certain utilized in the feelings, visions, moral values, beliefs and self-consciousness in a sustainable form.

4 Ананьев Б. Г. Психология и проблемы человекознания. – 1996. С.351.

Students walked out of sentences and the conclusion, in his conduct strictly stand, protect them with life skills and theoretical knowledge and skills at different levels on different areas of social – psychological concepts of introduction to the practical activities will be able to.

In the opinion of b. g. ananiv, 18 - 20 age fizologik on the circuit develops a high level of opportunities. The body's response to external influences, the optimal level of blood pressure increases, and blood kislarod with to'ynib hakozi. In the human o'quvchilik convenient opportunity will arise. Training and the ability to remember to take the person's information stored in the memory means. Later in the man psixik the dynamics of the task, not towards educational opportunities that pasaymaydi. The difference is the period of maturity of the people qonuniyat with the following:

various functions in the development of a flat at a time and does not happen (in memory at some stage, grow with a rapid pace of thought at one stage to another);

depending on the age of muvofiqlashgan will begin to explore the features depends on the interaction of different features;

mature age growth rate of the human mind in different stages of the evolution of the functional is high enough;

this function is the religion of a sudden drop in mika no will not;

biluv does not reduce the level of maturity during the period of education.

The biological aspects of the period from perfection of our youth, maturity in the social context, physical to energetic level is raised. But first youthful (16-17 year old), some of the children of manners specific to the external expression of their impact on the romantic period certain is held. The initial test in higher education (first session) students from the period of romantic is not only living, but the research irodaviy to give excellent, noble intentions bother to reach, you can order through intellectual labor, I must admit. From the impression emergency, the social after the test to read it, married men in relation to serious changes, things

and events, social folding men behave like that big of an adult in order to make rational to reflect on reality, tries to recognize.

I am beginning to arise during the class period high level of student independence of thought, teranlik, compact, not enthusiastic, critical improving the quality of every day, is enriched with new signs and symptoms. Students in self – management to a new level of insight to the mind as important aspects of development is raised. Thinking in students in the development of the formation of the scientific outlook in general and the social sciences, including history, philosophy, logic, the basics of economic theory, madaniyatshunoslik, literature, ethics, aesthetics, teaching, plays an important role in academic subjects such as psychology.

A spiritually mature person in the education system at the present time with the formation of the society of socio – economic development can achieve. For this purpose, higher education and public education of the students of pedagogical tools has developed and forms the form of the spiritual state and the new year. Students social and the spiritual state of the form of one of the bases of the new year, family, school, secondary special and higher education, and the mutual communion of communities, the rich people of national, cultural, historical traditions and their customs, human values, based on the results of their teaching also. The fate of society and the development of higher education students in many respects, that is, the future is in the hands of professionals. Therefore, the students the spiritual form of social – psychological should educate on the basis of principles.

1. Get healthy – this child came into the world each parent and also the country, have a healthy lifestyle without the duty in front of the nation felt it should be applied to daily life.

2. Physical and energetic – responsibility of each parent to bring up healthy children into the world that live with four sides should be.

3. Spiritually refreshing – get healthy and strong physical and mental perfection on the basis of principles which arise in children pillar understand many of the trigger and spiritual health of the child mental trigger to ensure that parents,

family and environment conditions, medicine, caregivers, teachers, employees, family times shall be the responsibility of the neighborhood.

4. A healthy mind – healthy four sides, perfect physical, spiritually healthy, I believe – of the people, the country, religion, Homeland, parents, in front of people to realize this civil duty.

5. Believe me – belief – parents of students, the motherland, be loyal to the people.

6. Knowledge – own chosen profession of every age in the conditions of market economy, social life itself would be knowledgeable on the specialty that is required.

7. Spiritual height – generation height healthy spiritual poverty may be separated from the spiritual. Perform this task responsibly and related to the members of his family.

CONCLUSION

Therefore, the spirituality of education and spiritual formation higher education students of the mansion, both have their place. This moral education, moral, intellectual, labor, professional, patriotism, physical, ecological, aesthetic soak into the minds and souls of young people with the type of education were go. Moral – ethics, moral values are universal and national norms shape.
